See more javascript examples PHP \$apikey = 'ABCD-1234'; \$value = '//a url starting with http or an HTML string Debenu PDF Tools is a small suite of utilities that lets users do more with their PDF files than just look at them Roger CA Alternatively some customers use a simple token system e.g urlencode(\$apikey),

MarginBottom with a value of 20 [page] Tag replaced with number of the pages currently being printed [frompage] Tag replaced with the number of the first page to be printed [topage] Tag replaced with the number of the last page to be printed [section] Tag replaced with the name of the current section Let us know if you need extra parameters or other API features Your page doesn't have to be W3C compliant but please be certain that the page your trying isn't missing links to images or files as we tend to reject pages like that by default :) Download PDF Download JPG PageWidth Page width - if you use this you must also use PageWidth PageHeight Page height - if you use this you must also use PageHeight ViewPort e.g Often used for authentication Large PDF files use 1 credit per 500kb of network traffic

Java We've just added a Java example! All the optional parameters below can be used by passing a secret parameter on the url that noone else will know e.g www.myurl.com/invoice?secret=abc123800x600 - Set if you have custom scrollbars or css attribute overflow to emulate window size Dpi Explicitly set the DPI which is 96 by default "&value=" , bcfaf6891f
